

## Introduction

Bia Blasta is a web app that simplifies meal planning and cooking by allowing users to select the ingredients they have on hand and selecting recipes that utilise those ingredients.

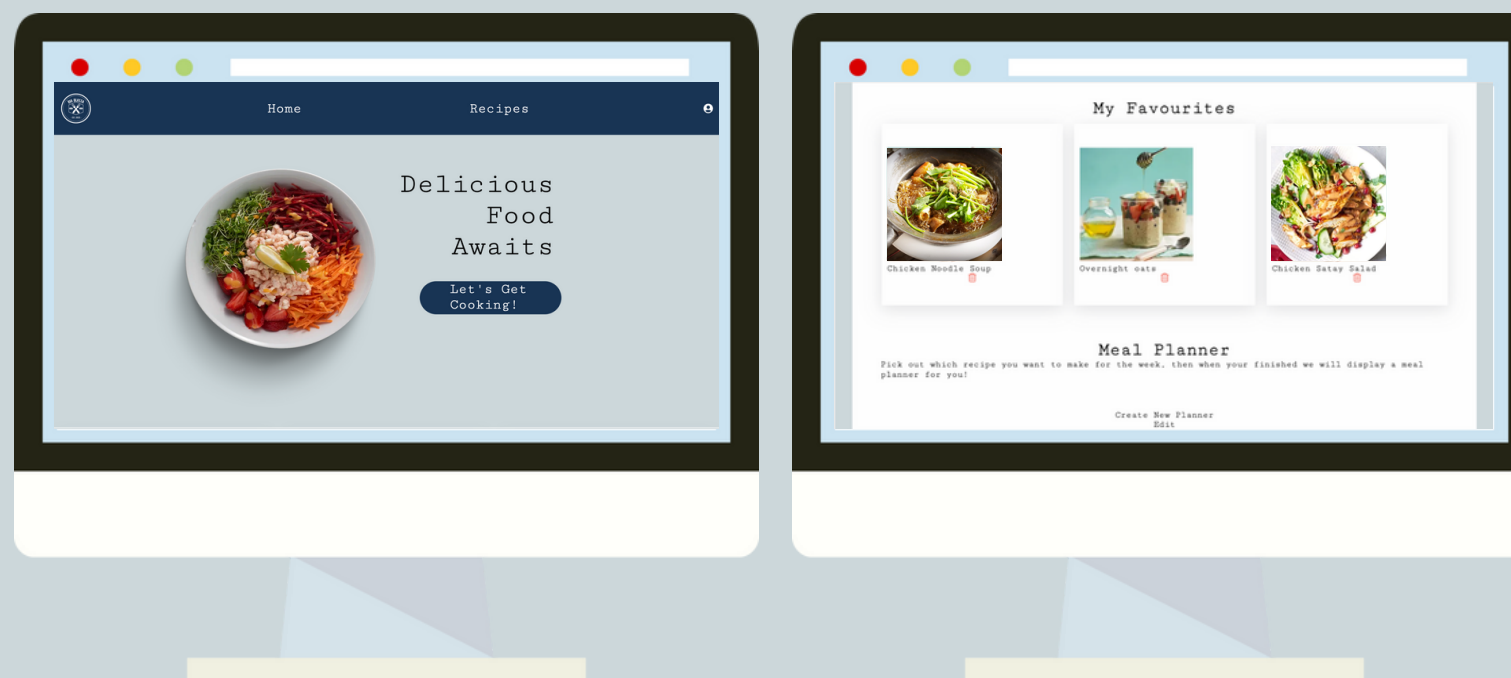

## Application

This project uses Next.js for front-end user experience with MongoDB, Node.js and Express for back-end functionality. Users can easily select from a range of ingredients to discover the perfect recipes. With a convenient sign-in feature, users can save their favorite recipes for future reference and even create a personalized weekly meal planner.
